For optimal claw condition

Intra Hoof-fit Gel, Liquid, Bath and Tape

IntraHoof-fit

Economic loss due to hoof ailments often underestimated

Hoof ailments among cattle and sheep often have a variety of causes. Besides housing, nutrition and hygiene, the performance level, breeding and the breed also play an important role. In the first instance, we are mostly moved by the suffering of the afflicted animal, but in reality, there is much more harm caused. For example, milking cows with hoof ailments produce drastically less milk, fertility decreases (longer time lapse between calves) and there is greater risk of mastitis. Furthermore, hoof ailments demand much more work and more treatment costs leading and are often the reason to remove the animal prematurely. The economic damage caused by hoof ailments in the dairy industry, for example, can easily rise to 300 euro per dairy cow per year.

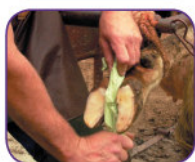

Intra Hoof-fit Gel & Intra Hoof-fit Liquid & Intra Hoof-fit Bath

The products Intra Hoof-fit gel, Intra Hoof-fit liquid and Intra Hoof-fit bath enable cattle and sheep farmers to treat the hooves of cows and sheep and to keep them in a healthy condition. If the animals are still afflicted, the products fully support the medical treatment. Intra Hoof-fit gel is ideally suited to treat individuals animals. Preferably treat using a low pressure sprayer. Intra Hoof-fit bath has been especially developed for preventive treatments, which can best be given in the Intra Bath. The products have been developed in close co-operation with dairy farmers, veterinarians, hoof trimmers and cattle specialists and thoroughly field tested.

Intra Hoof-fit gel For individual treatment

1. Trim the claws 2 to 3 times per year. All the animals should preferably be trimmed by a professional trimmer.

2. Clean the claw thoroughly. Make sure that any manure present is removed for the claw and the inter-digital space. Dry the claw.

3. Apply Hoof-fit gel to the claw and the inter-digital space using the brush provided.

4. Because of its super concentrated adhesive bonding, the Hoof-fit gel remains effective for 4 to 5 days. Then repeat treatment if necessary.

5. In very serious cases, we advise you to tape the claws. After maximum 4 days, the tape must be removed and the treatment repeated with Hoof-fit gel (this time without tape).

Intra Hoof-fit liquid For group treatment

1. Tether the animals to the grid of the feeding trough.

2. Rinse the claws clean with water, also in the inter-digital space.

3. Prepare a solution of 50% Hoof-fit liquid and 50% water.

4. Spray, using a low-pressure sprayer, the Intra Hoof-fit liquid on the back of the claw and in the inter-digital space.

5. Apply, for the first 3 treatments, a 50% solution, afterward treat the claws on a weekly basis with a 20% solution.

When the infection pressure has subsided, it suffices to treat the animals periodically with Hoof-fit bath. This product can be applied in the specially developed Intra Bath.

Hoof-fit gel and liquid contain minerals in chelated form. These work far better than the traditionally used minerals in sulphate form, because they are much more stable and remain soluble. The minerals in chelated form deal effectively with claw problems in combination with Aloe Vera and alcohol and ensure an optimal claw condition.

Ingredients:

- Plant-extract Aloe Vera
- Alcohol
- Minerals in chelated form (organic)
- Skin care product
- Specific binding agents

Contents:

- Liquid: 5 and 10 litres
- Bath: 20, 200 and 1000 litres
- Gel: 330 ml
